OUR TOY SHOP / CHAPTER TWO

Sort, match and order

We will sort things, match them and put small sets in order.

Mr Aliyu: Your shop is open! Let us make a game. First, tidy the leaf tickets and top counters.

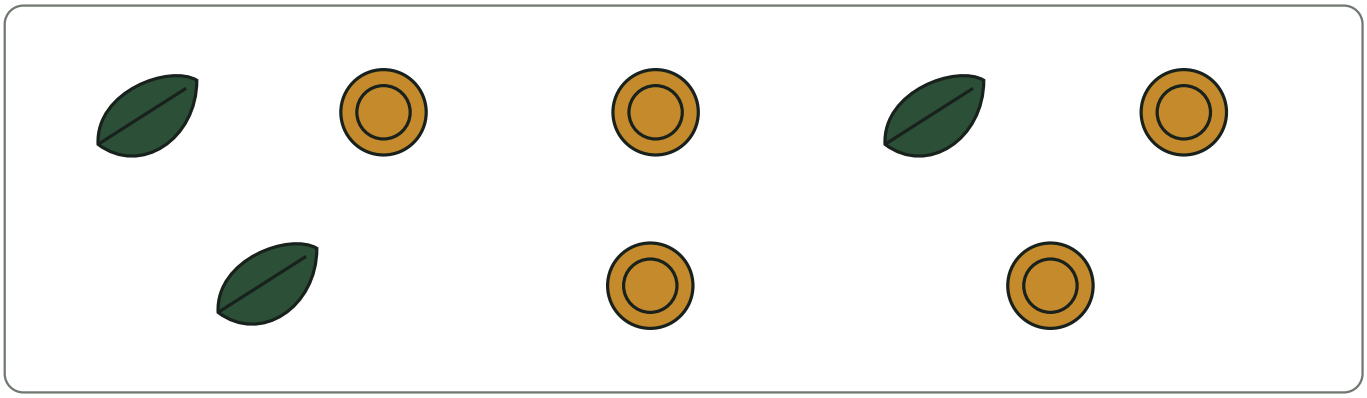

Aishatu: My box shop needs a tidy game tray.
Grace: I like things in their places.
Adamu: Let us take fair turns.
John: Can we find out which set has more?

Mr Aliyu: These are our game pieces. Watch me sort them. Then we can check: are there more tops or leaves?

WATCH AND TRY TOGETHER

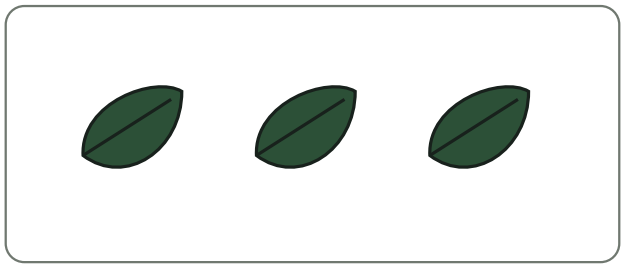

Give each set a place

A set is a collection. Sort by one rule.

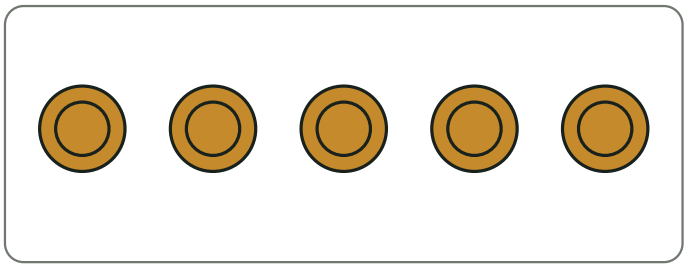

Mr Aliyu: I put leaves together and tops together. A leaf goes with the leaves. A top goes with the tops.

Leaves together

Tops together

Grace: I put a leaf with the tops by mistake.
Mr Aliyu: Check our rule. Where should it go?
Grace: With the leaves. I can try again.

Try together. I circled one leaf. Point to the other leaf. Then point to each top.

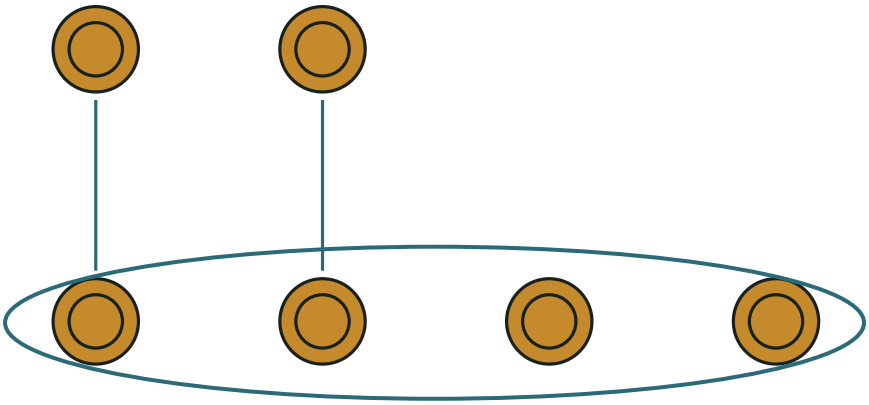

Grace: Now I can keep the two sets tidy.
Mr Aliyu: Tell a partner our sorting rule.

WATCH AND TRY TOGETHER

One partner for each

Match one object to one object to compare the sets.

Mr Aliyu: I draw a line from one top to one top. Each top can have only one partner.

Two tops in the lower set have no partner.
Four is more than two. Two is fewer than four.
I circle the whole set with more.

Adamu: The long row must have more!
Mr Aliyu: Let us match and check.

Draw one line from each top in the upper row to a different top below. Does every top have a partner? Tell a partner.

LEARN, THEN TRY

From fewest to most

Count each set. Begin with the set that has the fewest.

Mr Aliyu: I count these sets: two, three, four. I put two first, then three, then four.

2

3

4

Aishatu: I want to rush to the game.
Mr Aliyu: Pause and count each set first.

Write these numbers from smallest to largest: **4, 1, 3.**

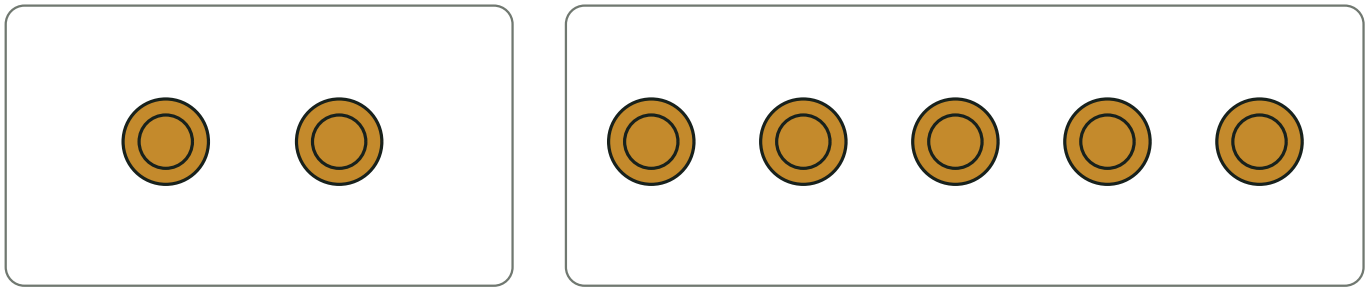

Draw **1** dot in the left box.
Draw **3** dots in the right box.

YOUR TURN

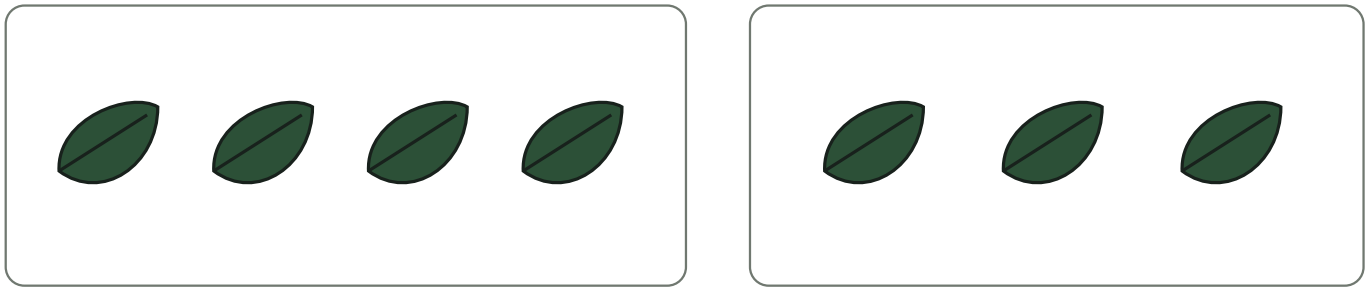

Which has more?

Use matching or counting. Try these on your own.

Mr Aliyu: Point to the set with more tops.
Circle that whole set.

Point to the set with fewer leaves.
Circle that whole set.

John: I want to try before a hint.
Mr Aliyu: Take your time. When you finish, tell me how you checked.

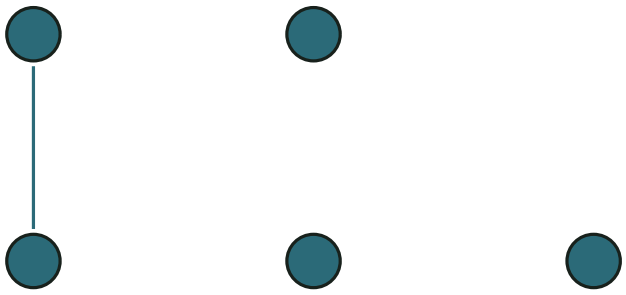

REMEMBER, THEN GET HELP

Show how you know

Try to remember what Mr Aliyu showed you before looking back.

Mr Aliyu: Tell or show a partner how to compare two sets. Use tops or your own drawing in this space.

Need a smaller step? Match each dot in the upper row to a different dot below. Mr Aliyu has drawn one match.

Finish the matching. Point to the set with more.
Now try your own two sets again.

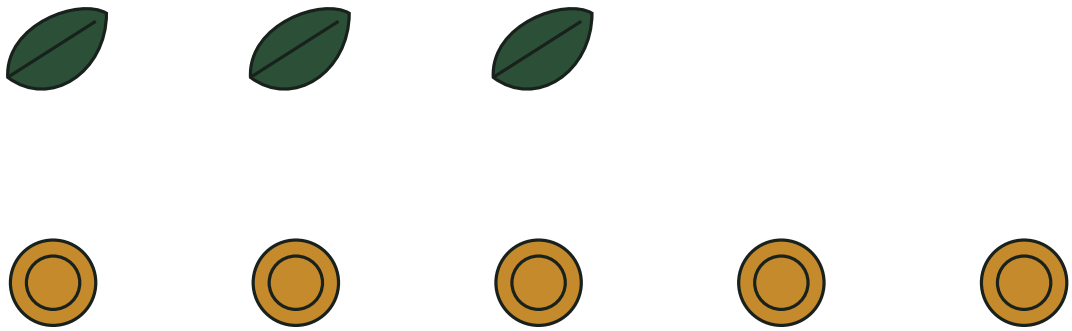

Adamu: Your turn, then mine!
Make a set of **5** large objects on the table.
Ask your partner to check. Swap roles.

FINISH THE STORY / A FRESH TRY

Ready for our game

Use what you have learned to finish tidying the toy shop.

Mr Aliyu: We sorted our game tray. Match each leaf to a different top. Draw the lines.

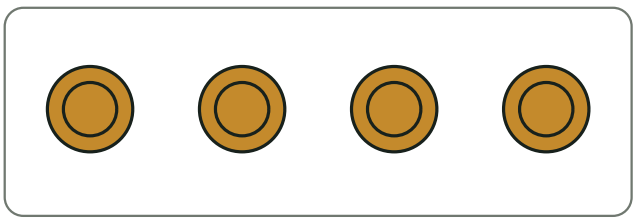

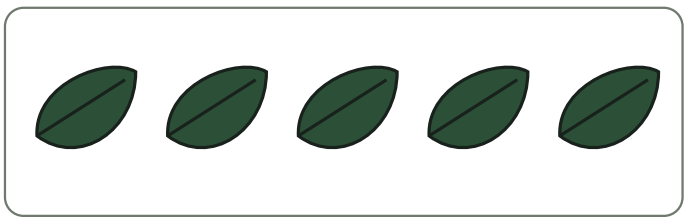

John: Point to the set with more.
Aishatu: Each leaf is a ticket for one top. Put the tops with no partner in the spare box.
Grace: The two spare tops are away. Now the tray is tidy.
Adamu: We can take fair turns at our game!

A fresh try. Work on your own.
Circle every leaf below. Leave the tops without circles.

Which set has more? Circle that whole set.

FOR THE TEACHER

Teach, notice and return

P1-02 / Sort, match and order / Mr Aliyu leads.

Objective. Sort collections and compare small sets. Also retain the source ordering practice within 1 to 5. Read all pupil text aloud. Prerequisite: count objects to five; revisit the Chapter 1 model as needed. The pupil pages have no numbered instructions.

Concrete start. At a reachable table, provide three clean, large leaves and five large, clean tops. Use pieces too large to swallow; supervise use. These are pretend tickets and counters, not food. Sort by type in front of pupils, then invite them to sort a separate tray. A set means a collection. Reuse this same three-leaf/five-top tray for the ending. No pieces are added or removed.

Model, practise, compare. Enact p. 2 with real pieces before using the pictures. On p. 3 pair two tops with four, one to one, and point to the two unmatched tops. Name more and fewer. On the equal-row activity, invite a prediction, then match: all three have partners in both rows, so the sets have the same number even when spaced differently. On p. 4 count the dot sets 2, 3, 4 before connecting them to numerals. Read the numerals aloud.

Observe and help. Confuses type with colour: restate leaves together/tops together, sort one, then ask the child to place another. Counts twice: move each counted object aside. Chooses by row length: bring one object beside one partner. Gives a partner twice: physically move paired objects together. Cannot order: build sets of 1, 3 and 4, then compare adjacent sets. Recheck each difficulty with fresh small sets; accept speaking, pointing or moving objects before writing.

Recall and fresh checks. On p. 6 wait before offering help. After support, change the quantities (for example 1 and 2) and ask again. For this recheck, 2 has more and 1 has fewer. Keep p. 7 fresh tasks independent before feedback. On another day, ask what Mr Aliyu showed. Give four leaves and two tops to sort and compare, then ask pupils to order 5, 2, 3. Answers: leaves/tops; four leaves more, two tops fewer; 2, 3, 5. Record independent / with help / not yet.

FOR THE TEACHER

Answers and chapter notes

Adult task IDs preserve the six source questions; pupil tasks are unnumbered.

Every example and added task
p. 1 tray and p. 2 sort model: 3 leaves and 5 tops. Guided sort: the leaf in the second position is already circled; point to the leaf in the fourth position. Tops are first and third. Grace moves her leaf to the leaves.
p. 3 model: 2 matched pairs, 2 unpaired tops in the four-set; 4 more, 2 fewer. Guided rows: 3 in each, every top has a partner; same number. Any one-to-one bijection is valid.
p. 4 model: 2, 3, 4 dots in increasing order.
p. 6 support: 2 pairs and 1 unmatched lower dot; lower set of 3 has more. Accept either valid line from the remaining upper dot to a free lower dot.
p. 7 resolution: 3 pairs, 2 spare tops; tops more, leaves fewer. Put those 2 unmatched tops in a real spare box. Read the closing dialogue after doing this action.
p. 7 fresh sort: circle second and fourth objects (leaves). Fresh comparison: 5 leaves more than 4 tops; circle the right set.

P1-02-Q1 (p. 4): 1, 3, 4

P1-02-Q2 (p. 4): One dot in one set; three in the other.

P1-02-Q3 (p. 5): 5 tops

P1-02-Q4 (p. 5): 3 leaves

P1-02-Q5 (p. 6): Exactly five objects.

P1-02-Q6 (p. 6): Match one to one or count both sets.

Words: sort = group by a rule; set = collection; match = pair one with one; more/fewer = greater/smaller number; same number = no unmatched objects. Historical source: original p. 1; objective/question links retained. Current curriculum comparison and Gombe educator review pending.

Credits and scope: existing built-in image_gen portraits; prompts/licences in artwork/manifest.json and adjacent provenance. Exact leaves, tops, dots and lines drawn by code. A4 RGB review chapter. Classroom trials, physical print test and printer approval pending. Full-volume glossary, mapping, credits, Book 2 preview and four final AI pages retained in book.qmd.
