P1-01 • LEARN

One to five

Today: Count, read, write and order 1 to 5.

1 Look and Talk

Aishatu's pretend tea shop needs a cup for every friend. Mrs Binta helps the club count carefully.

2 Learn Together

Touch each cup once. Say one number word as you touch it. The last number tells how many. Match each group to its numeral, then practise forming 1 to 5 in a workbook or exercise book.

WORKED EXAMPLE

Touch three cups once each: one, two, three. There are 3 cups. A circle can represent each cup: two cups can be shown by two circles.

A ● ● ●

B ● ● ● ● ●

WORDS

count; number; how many

HINT

Use objects first. Say the number sentence or explain the comparison. Check another way.

TEACHER

Model one touch and one number word per cup, then the total. Check quantity, numeral recognition and formation separately. Read aloud; allow speaking, pointing or moving objects before writing. Work in the workbook or an exercise book.

P1-01 • PRACTISE

One to five

3 Try It

1. Count row A. Write the number.

2. Count row B. Write the number.

3. Draw 2 circles.

4. Write 1 to 5 in order.

4 Play or Make

Count large unbreakable cups with a partner. Make a requested set from 1 to 5; choose its numeral from shuffled cards. Give each friend one cup for the pretend shop. Swap roles.

5 Check Yourself

5. Show 4 fingers. How many?

6. Musa counts one top twice. Show a better way.

I can do this. / I need more practice.

P2-04 • LEARN

Make a new ten

Today: Add two-digit numbers with regrouping.

1 Look and Talk

Musa counts 8 loose strips and 7 more. What happens when the ones reach ten?

2 Learn Together

When there are 10 or more ones, exchange 10 ones for 1 ten. Write the remaining ones. Add the new ten to the tens column.

WORKED EXAMPLE

28 + 17: 8 + 7 = 15 ones = 1 ten and 5 ones. Tens: 2 + 1 + 1 = 4. Total 45. Check: 45 − 17 = 28.

28 + 17

15 ones = 1 ten and 5 ones

WORDS

regroup; exchange; total

HINT

Use objects first. Say the number sentence or explain the comparison. Check another way.

TEACHER

Say what is exchanged: ten ones for one ten. Keep the new ten visible.

P2-04 • PRACTISE

Make a new ten

3 Try It

1. 27 + 16 = __.

2. 38 + 24 = __.

3. 46 + 37 = __.

4. 59 + 25 = __.

4 Play or Make

Build 26 and 18 with paper bundles. Join, exchange ten loose strips for one bundle, and record 44.

5 Check Yourself

5. 18 tops and 15 more make how many?

6. Why does 8 + 7 give an extra ten?

I can do this. / I need more practice.

P3-15 • LEARN

Measure lengths accurately

Today: Measure dimensions in cm/m and explain standard units.

1 Look and Talk

Musa measures a garden label. Where must the ruler’s zero go?

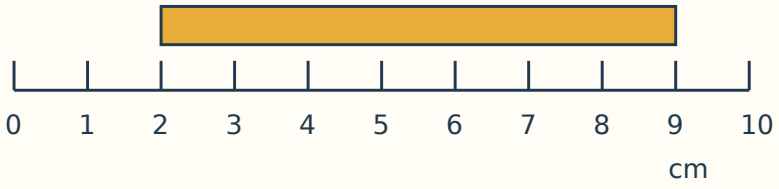

2 Learn Together

Length, width and height are dimensions. Place zero at one end and read the other end. Use a tape or metre stick for longer distances. Body units vary; standard units allow fair comparisons.

WORKED EXAMPLE

A strip from 0 cm to 8 cm is 8 cm long. A strip from 2 cm to 9 cm is $9 - 2 = 7$ cm long.

Schematic: use a real ruler to measure

WORDS

dimension; width; height; standard

HINT

Use objects first. Say the number sentence or explain the comparison. Check another way.

TEACHER

The schematic ruler is not actual size. Use a physical ruler and its zero mark.

P3-15 • PRACTISE

Measure lengths accurately

3 Try It

1. Strip from 0 cm to 12 cm: length?

2. Strip from 3 cm to 11 cm: length?

3. 2 m = __ cm.

4. Choose a convenient unit for door height.

4 Play or Make

Measure a book’s length and width with a real ruler. Repeat in hand spans. Explain why standard results should agree more closely. Find another use for a measured length.

5 Check Yourself

5. Measure your book’s length and width.

6. Why do standard units help comparisons?

I can do this. / I need more practice.
