WELCOME TO OUR LEARNING CLUB

Meet your new friends

Count. Explore. Discover. Read these introductions with an adult.

Aishatu

The toy maker

Hello! I'm Aishatu. I live in Gombe town.

My cousins and I make cardboard toys. Sometimes I rush! I am learning to stop and check.

Come and make something with me!

Adamu

The storyteller

Hi! I'm Adamu. My family comes from Dukku.

I love stories and games. Sometimes I guess too soon. My friends help me check.

Come and play! Everyone gets a turn.

What do you like to make or play?

WELCOME TO OUR LEARNING CLUB

More friends to meet

Count. Explore. Discover. Read these introductions with an adult.

Grace

The careful explorer

Hello! I'm Grace. My family comes from Billiri.

Grandfather and I keep a notebook. We draw things we notice. A mistake can teach me something!

What can we discover together?

John

The puzzle maker

Hi! I'm John. My family comes from Yamaltu/Deba.

I draw places and make puzzles. I use a wheelchair. I am learning to ask for help.

Bring your ideas. Let's solve a puzzle!

You belong here too. Let's learn and help one another.

CHAPTER 1 / A PROBLEM TO SOLVE

One to five

Count, read, write and order 1 to 5.

The friends use counters to play a game.

Aishatu: Can you help us count our game pieces?

Adamu: Let's put them in a line.

Grace: Touch each one once.

John: Say one number each time you touch one!

Get ready Ask an adult for 3 large counters.
You can use large, clean bottle tops. Put them in a line.

LEARN / ONE TOUCH, ONE NUMBER

Let's count together

Touch a dot and say its number at the same time.

1. Start at the left. Touch the first dot and say 'one'.

one **two** **three**

2. Touch the next dot and say 'two'.

3. Touch the last dot and say 'three'.

Stop. There are 3 dots. The last number, three, tells how many.

Count each row with a partner.

Number	Say	Touch and count these dots
1	one	●
2	two	● ●
3	three	● ● ●
4	four	● ● ● ●
5	five	● ● ● ● ●

PRACTISE / QUESTIONS 1 TO 4

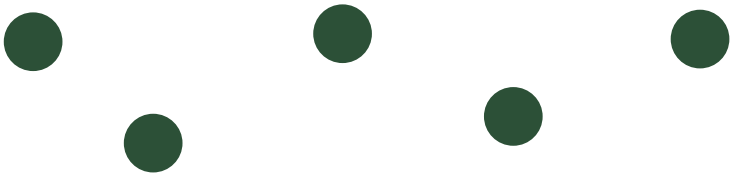

Count, draw and write

Name: _____ Date: _____

1. Count these dots. Write how many in the box.

2. Count these dots. Write how many in the box.

3. Draw 2 circles.

4. Write 1 to 5 in order.

Trace these numbers. Write them again in the empty boxes.

1 2 3 4 5

PRACTISE / QUESTIONS 5 AND 6

Help your counting club

You can speak, point or use counters to show your answer.

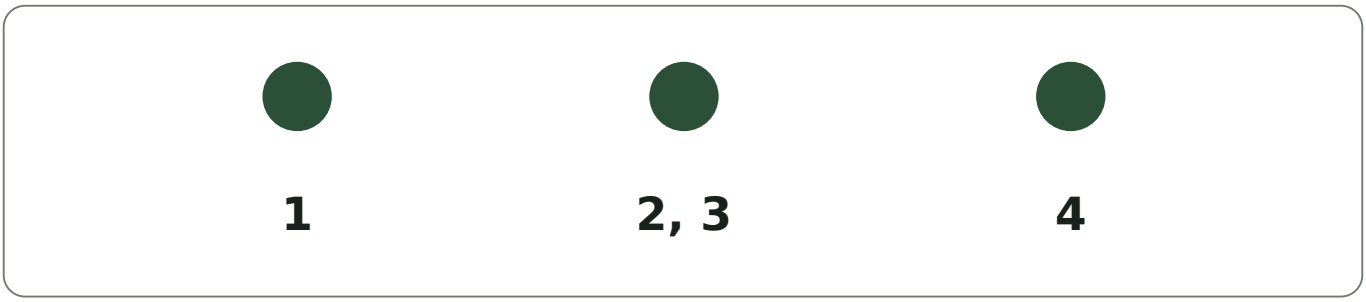

5. Show 4 fingers. How many?

Write how many: ☐

6. Adamu counts one counter twice. Show a better way.

Adamu's mistake

He says: "one, two, three, four".

He gave the middle dot two numbers.

Your turn: touch each dot once. Count aloud.
How many dots are there? ☐

Show Grace what you know

Put 4 counters on the table for Grace.
Ask a partner to say one number below. Point to it.

3	1	5	2	4

TEACHER / KEEP WITH THE CHAPTER

Notice and help

Read aloud, observe the action and choose the next step.

Prepare: five large, clean counters. Supervise; use pieces too large to swallow. Read introductions and story together. A pupil may point, speak or move objects; assess handwriting separately. Family settings are fictional.

Answers
1: 3. 2: 5. 3: Two separate circles. 4: 1, 2, 3, 4, 5. 5: 4.
6: The middle counter is touched twice. Touch or move each counter once; the correct total is 3. The spoken labels 1 / 2, 3 / 4 show the wrong count, not the correct quantities.

Fresh check (page 6)
Without showing a model set, ask for 4 counters. Say one number at a time: 1, then 2, then 4. Ask the child to point to it. Record each response as independent / with help / not yet. Correct copied numbers alone do not establish recognition.

If you notice this, try this

A dot is skipped or counted twice.
Put counters in a line. Touch one while saying one number.
Recheck: Give a fresh set of 2, then 3. Watch each touch.

The child counts but cannot say how many.
Repeat the last number: 'Three. There are three.'
Recheck: Count a fresh set and ask 'How many altogether?'

Numerals are copied but not recognised.
Match a small set to its number card. Say the number.
Recheck: Shuffle the cards. Ask for 1, then 2, then 4.

Another day: ask for 5 counters and count them. Spread the same counters out. Count again. Ask, "Did the number change?" No: there are still 5.
Ready for more? Make a row of 4 counters. Rearrange the same counters and count again.
